Sea Turtle Habitat and Migration

Sea turtles inhabit tropical and subtropical waters around the world, but in the case of the leatherback turtle, it reaches the cold waters of Alaska and the European Arctic occasionally.

The adults stay in shallow water and near the coasts, but sometimes they enter the open sea. They live peacefully with other living creatures of the marine fauna, and some stay close to the coral reefs or rocky areas.

Beaches are paramount for these reptiles since the females come to the shore to deposit their eggs into the nests.

Estuaries, lagoons where water from the ocean mixes with fresh water from the rivers, mangroves, and seagrass with tall vegetation are also part of their habitat. The high diversity of aquatic plants and wildlife complement the environment of the turtles that live there.

The coral reefs, which add color and beauty to the seabed, also provide habitat for more than 530 marine organisms, including sea turtles.

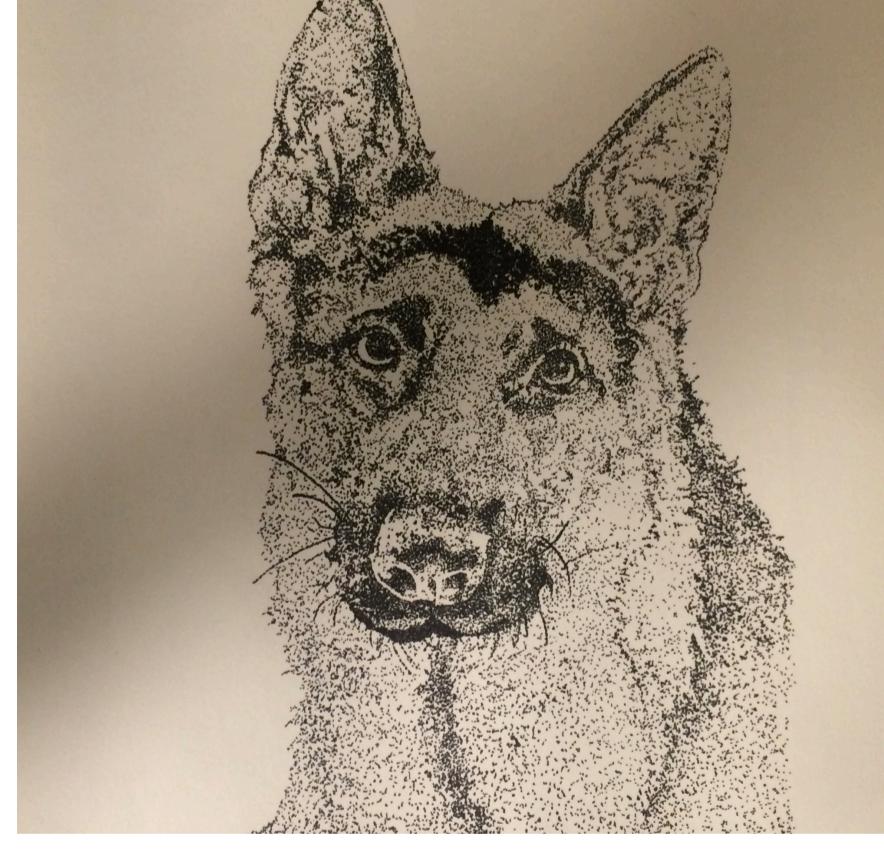

Sea turtles migrate for two reasons, searching for food or reproduction. Trips are hundreds but sometimes thousands of miles long, depending on the species and the success of their quest.

The Leatherback sea turtle is the species with the longest migrations, traveling around 6,000 km each year. It crosses the Pacific Ocean from Asia to the west coast of the United States to get more food.

Green sea turtles travel approximately 2,100 km across the Pacific Ocean to reach the waters surrounding the Hawaiian Islands.

The Kemp's Ridley sea turtle covers two main routes within the region of the Gulf of Mexico; one to the north, towards the Mississippi area, and the other to the south of Mexico reaching the Yucatan Peninsula, in the Bank of Campeche.

In the case of hawksbill sea turtles, they have various migratory patterns. Some specimens show long migrations during breeding seasons, others travel short distances, and some do not migrate at all.

Through the ocean has become a popular past time. Riding waxed boards and riding large waves into the shore. As like with surfing, Surfing implies that a rider can successfully use upon a surfboard as the wave begins to swell and crest.

It because the cost low. A good board buy a good board nearby beach. Be g you should learn.
